

Contents

1. Introduction	3	5. Classification	58
1.1. Scope and limits	3	5.1. Order Scleractinia	58
1.2. Structure	4	5.1.1. Higher classification	58
1.3. Acknowledgements	5	5.1.2. Families	61
2. Historical Aspects	7	5.1.3. Genera	100
2.1. Evolution	7	5.2. Subclass Octocorallia	100
2.2. Classification and Taxonomy	7	6. Discussion	103
2.2.1. Suborders	8	6.1. Diversity changes and ranges	103
2.2.2. Families	10	6.2. Evolution	106
2.2.3. Genera and species	10	6.3. Abundance patterns	111
2.3. Methods	11	6.3.1. Richness of faunas	111
2.4. Critical reflection	11	6.3.2. Species per genus	111
3. Morphology	16	6.3.3. Genera	113
3.1. Skeletal elements	16	6.3.4. Families	118
3.2. Organisation	16	6.3.5. Localities	119
3.3. Septa	20	6.4. Palaeoecology	121
3.3.1. Microstructure	20	6.5. Palaeobiogeography	123
3.3.2. Perforation	21	6.5.1. Z-Corals	124
3.3.3. Ornamentation	23	6.5.2. AZ-Corals	126
3.3.4. Shape, length and thickness	27	6.5.3. Endemism	127
3.3.5. Symmetry and generations	28	6.6. Bauplan diversification	128
3.3.6. Pali	32	6.7. Biostratigraphy	130
3.3.7. Costae and confluence	33	6.8. Interesting but useless statistics	132
3.3.8. Interconnections	35	6.9. Conclusions	134
3.3.9. Synapticulae	36	7. Systematic part	136
3.3.10. Lonsdaleoid septa	37	7.1. Limits	136
3.4. Columella	37	7.2. Introduction	136
3.5. Endotheca, exotheca and marginarium	38	7.3. List of genera	138
3.6. Wall, epitheca, and coenosteum	40	8. Appendices	690
3.7. Budding	43	8.1. Type and type species denomination	690
4. Methods	45	8.2. Geographic areas	690
4.1. Sample preparation	45	8.3. Stratigraphical framework and age abbreviations	690
4.2. Imaging and illustration	47	8.4. Collections	692
4.3. Description	49	8.5. Cited literature	694
4.4. Determination	50		
4.4.1. Higher classification	50		
4.4.2. Species separation	52
